Diego Espino

Full Stack Engineer & Technical Lead | Cloud & AI Infrastructure

DFW Dallas Fort Worth TX | diegoespinowork@gmail.com
linkedin.com/in/developerdiego | github.com/DailyDisco | digitaldiego.xyz

Led teams of four to five developers across client products. Hands-on across React frontends, Go and Python services, cloud migrations, and local AI infrastructure.

PROFESSIONAL EXPERIENCE

DFW Software Consulting
Mar 2025 - Present

Full Stack Engineer | Dallas-Fort Worth, TX

- Led a four-developer team replacing legacy property software for **1,000+ units**; owned architecture, schema design, and releases using Next.js, TypeScript, PostgreSQL, and Prisma.
- Cut measured daily administrative work from **3 hours to 1 hour** per employee by automating invoicing, financial calculations, and reporting.
- Led five developers building CM Data's truck damage estimator; designed the Node.js API and built most of the React/Next.js frontend with Gemini image analysis and VIN extraction.
- Rebuilt building-alert email delivery around durable PostgreSQL jobs, idempotent requests, and bounded retries; tested interrupted and concurrent workers against PostgreSQL and SMTP.
- Restored PostgreSQL integration tests in CI and reduced a repository-wide hook scan from 9.8 seconds to 0.2 seconds by batching Git reads while retaining validation gates.

Craft Digital
Jul 2026 - Present

Full Stack Engineer | Remote

- Migrated **seven production lead workflows** from Kestra on AWS to n8n on Railway; persisted submissions before acknowledgement and added crash recovery and payload reconciliation.
- Built Python/dbt reporting for 27 franchises plus corporate, with atomic PostgreSQL publication and rollback; validated data before taking exclusive locks and measured reader-blocking time.
- Built tenant-scoped Next.js dashboards that keep drilldowns on the same data snapshot as their reports and prevent rolled-back data from appearing newly updated.

Independent Consulting / Lumara Technologies
2021 - Present

Full Stack Engineer | Dallas, TX

Independent consulting since 2021; founded Lumara Technologies LLC in 2025.

- Lead backend engineering for a confidential mixed reality platform using FastAPI, PostgreSQL, Redis, AWS, and Unity/C#; built resumable event streams, bounded queues, and scoped access.
- Added a CI gate comparing generated OpenAPI contracts with Unity C# calls and models to catch cross-repository API drift; implemented Cognito authentication safeguards.
- Built image-driven search with validated model outputs and malformed-response fallbacks; connected semantic retrieval to query-aware recommendations in the backend service.
- Built a Go and React client workspace with tenant-scoped collaboration and versioned delivery approvals; tested access isolation and stale decisions through Go/PostgreSQL integration and browser tests.

OPEN SOURCE CONTRIBUTIONS

ExLlamaV3 | C++ Performance Optimization

ExLlamaV3 PR #447

- Improved cold prompt throughput by **18%** (1,238 to 1,458 tokens/second) in a six-GPU benchmark using multithreaded AVX2 CPU all-reduce. Merged upstream; decode speed was unchanged.

TabbyAPI | Python Reliability Fix

TabbyAPI PR #493

- Fixed recovery to release the old generator before allocating its replacement, preventing overlapping main-process host caches. Added an object-release regression test; merged upstream.

CLOUD AND INFRASTRUCTURE

Multi-GPU Inference and Homelab

- Built and operate a local inference server with eight NVIDIA RTX 3090 GPUs and 192 GiB combined GPU memory. Serve coding agents through TabbyAPI/ExLlamaV3 and a llama.cpp worker.
- Operate Proxmox VMs and a dozen services using Linux, Docker Compose, Caddy, and Cloudflare Tunnels; automate provisioning, Tailscale-only administration, metrics, and logs.

Agent Environments and MCP Integrations

- Automated agent setup and model-catalog updates across eight Linux, macOS, and Windows machines, preserving credentials and custom configuration with rollback and offline cache retention.
- Configure Hermes profiles, Model Context Protocol (MCP) tools, and local inference; publish reusable development workflows, review checklists, and build/test hooks.

SELECTED PROJECTS

React and Go SaaS Starter

Source code on GitHub

- Built a public React/TypeScript and Go/Chi code sample with tenant-scoped authorization, Stripe billing, PostgreSQL-backed background jobs, and integration tests.

VOLUNTEER EXPERIENCE

Games For Love

Sep 2025 - Present

Volunteer Full Stack Web Developer | Remote

- Led frontend architecture for a nonprofit streaming and donation platform using Next.js, TypeScript, ShadCN UI, and Tailwind CSS; built accessible components and shared patterns with designers and backend developers.

TECHNICAL SKILLS

Full stack: TypeScript, JavaScript, React, Next.js, Node.js, Go, Python, FastAPI, REST, GraphQL, C#, Unity

Data and automation: PostgreSQL, SQL, Prisma, Redis, DuckDB, dbt, ETL, n8n

Cloud and systems: AWS (ECS, S3, CloudFront, Bedrock, Cognito, ElastiCache), Railway, Terraform, Docker, Linux, Proxmox, Tailscale

Delivery and quality: GitHub Actions, CI/CD, Vitest, Playwright, pytest, Prometheus, Grafana

Agents and inference: Hermes, MCP, Project Maya, ExLlamaV3, TabbyAPI

CERTIFICATIONS

AWS Certified Developer - Associate | AWS Certified Cloud Practitioner

Languages: English and Spanish
