Diego Espino

Full Stack Engineer | Technical Leadership | Cloud Infrastructure

Lewisville, TX (Dallas-Fort Worth) | diegoespinowork@gmail.com
linkedin.com/in/developerdiego | github.com/DailyDisco | digitaldiego.xyz

Full-stack engineer and technical lead delivering web applications, cloud migrations, and data platforms. Built a platform serving **1,000+ property units** and automation that cut daily administrative work from **3 hours to 1 hour** per employee. Bring hands-on AWS, distributed systems, GPU infrastructure, and merged open-source performance contributions.

PROFESSIONAL EXPERIENCE

DFW Software Consulting
Mar 2025 - Present

Full Stack Engineer (Contract) | Dallas-Fort Worth, TX

Primary client engagement through Lumara Technologies LLC.

- Led architecture, schema design, and releases for Emmut Properties' management platform with a four-developer team, replacing legacy software for **1,000+ units** using Next.js, TypeScript, PostgreSQL, and Prisma.
- Reduced daily administrative work from **3 hours to 1 hour** per employee by automating invoicing, financial calculations, and reporting.
- Rebuilt building-alert email delivery with durable PostgreSQL jobs, idempotent requests, and bounded retries; tested interrupted and concurrent workers against real PostgreSQL and SMTP.
- Led a five-developer team building CM Data's truck damage estimator; designed the Node.js API and built most of the React/Next.js frontend with Gemini image analysis and OCR-based VIN decoding.

Craft Digital
Jul 2026 - Present

Full Stack Engineer (Contract) | Remote

Client engagement through Lumara Technologies LLC; Joshua Tree Experts platform.

- Migrated **seven production lead-intake workflows** from Kestra on AWS to n8n on Railway; built durable intake with persistence before acknowledgement, crash recovery, and payload reconciliation.
- Engineered Python/dbt reporting pipelines for 27 franchise tenants plus corporate, with frozen source snapshots, lossless financial-data transport, and atomic PostgreSQL publication with rollback.
- Built Next.js/PostgreSQL dashboard readers with tenant-scoped access, consistent snapshots, and publication checks that prevent incomplete or mixed-generation audience exports.

Independent Consulting
Jan 2022 - Present

Full Stack Engineer | Dallas, TX

Founder, Lumara Technologies LLC (2025 - Present); independent consulting since 2022.

- Lead backend engineering for a confidential mixed reality platform using FastAPI, PostgreSQL, AWS, and Unity/C#; implemented Redis-backed shared state and resumable server-sent events with backpressure and channel authorization.
- Implemented scoped role-based permissions and Cognito authentication safeguards; built OpenAPI contract checks for Unity C# calls and data models.
- Defined development AWS ElastiCache infrastructure in Terraform with private subnets, application-scoped security groups, and SSM configuration.
- Delivered a subscription music platform using Next.js, TypeScript, Prisma, tRPC, Stripe, and AWS S3/CloudFront; built Docker CI/CD pipelines with deployments under three minutes.

OPEN SOURCE CONTRIBUTIONS

ExLlamaV3 | C++ Performance Optimization

ExLlamaV3 PR #447

- Improved cold prompt throughput by **18%** (1,238 to 1,458 tokens/second) on a six-GPU benchmark through multithreaded AVX2 CPU all-reduce for tensor-parallel inference. Merged upstream; decode speed remained unchanged.

TabbyAPI | Python Reliability Fix

TabbyAPI PR #493

- Fixed generator replacement during error recovery to release the previous instance before allocating its replacement, preventing overlapping main-process host caches. Added a regression test for object release; merged upstream.

CLOUD AND INFRASTRUCTURE

Multi-GPU Inference and Homelab

- Built and operate an inference server with six NVIDIA RTX 3090 GPUs and 144 GB of combined GPU memory, using ExLlamaV3, TabbyAPI, and an OpenAI-compatible gateway for coding agents.
- Operate Proxmox virtual machines and a dozen self-hosted services using Linux, Docker Compose, Caddy, and Cloudflare Tunnels; automate provisioning, Tailscale-only SSH access, metrics, and logs from first boot.

SELECTED PROJECTS

React and Go SaaS Starter

Source code on GitHub

- Built a React/TypeScript and Go/Chi foundation for multi-tenant applications with PostgreSQL, role-based access, authentication, and Stripe billing; included Docker deployment with rollback, GitHub Actions, Playwright and Go integration tests, and Prometheus/Grafana monitoring.

VOLUNTEER EXPERIENCE

Games For Love

Sep 2025 - Present

Volunteer Full Stack Web Developer | Remote

- Led frontend architecture for a nonprofit streaming and donation platform using Next.js, TypeScript, ShadCN UI, and Tailwind CSS; established reusable, accessible components and shared patterns with designers and backend developers.

TECHNICAL SKILLS

Full stack: TypeScript, JavaScript, React, Next.js, Node.js, Go, Python, FastAPI, REST, GraphQL, C#, Unity

Data and automation: PostgreSQL, SQL, Prisma, Redis, DuckDB, dbt, ETL, n8n

Cloud and systems: AWS (ECS, S3, CloudFront, Bedrock, Cognito, ElastiCache), Railway, Terraform, Docker, Linux, Proxmox, Tailscale

Delivery and quality: GitHub Actions, CI/CD, Vitest, Playwright, pytest, Prometheus, Grafana

CERTIFICATIONS

AWS Certified Developer - Associate | AWS Certified Cloud Practitioner

Languages: English and Spanish
