Diego Espino

Full Stack Engineer & Technical Lead | Cloud & AI Infrastructure

DFW Dallas Fort Worth TX | diegoespinowork@gmail.com
linkedin.com/in/developerdiego | github.com/DailyDisco | digitaldiego.xyz

Led teams of four to five developers across client products. Hands-on across React frontends, Go and Python services, cloud migrations, and local AI infrastructure.

PROFESSIONAL EXPERIENCE

DFW Software Consulting
Mar 2025 - Present

Full Stack Engineer (Contract) | Primary client engagement through Lumara

- Led a four-developer team replacing legacy property software for **1,000+ units**; owned architecture, schema design, and releases using Next.js, TypeScript, and PostgreSQL.
- Cut measured daily administrative work from **3 hours to 1 hour** per employee by automating invoicing, financial calculations, and reporting.
- Built email delivery that recovers from interrupted workers using durable PostgreSQL jobs, idempotency, and bounded retries; tested concurrent execution against PostgreSQL and SMTP.

Craft Digital
Jul 2026 - Present

Full Stack Engineer (Contract) | Concurrent client engagement through Lumara

- Migrated **seven production lead workflows** from Kestra on AWS to n8n on Railway; added durable intake, crash recovery, and reconciliation.
- Built Python/dbt reporting for 27 franchises plus corporate, with tenant-scoped Next.js dashboards, consistent data snapshots, and publication rollback.

Independent Consulting / Lumara Technologies
Jan 2022 - Present

Full Stack Engineer | Consulting since 2022; founded Lumara in 2025

- Lead backend engineering for a confidential mixed reality platform using FastAPI, PostgreSQL, Redis, and AWS; built resumable events, scoped access, and Unity API contract checks.
- Built a Go and React client workspace with tenant-scoped collaboration and versioned delivery approvals; tested access isolation and stale approval handling.

INFRASTRUCTURE AND OPEN SOURCE

- Built and operate a seven-RTX-3090 inference server (168 GiB combined GPU memory) and Proxmox homelab supporting coding agents and a dozen self-hosted services.
- Automated agent setup and model catalog updates across eight Linux, macOS, and Windows machines; configure Hermes and Model Context Protocol (MCP) tools with rollback.
- Contributed merged fixes to ExLlamaV3 and TabbyAPI: **18%** higher cold prompt throughput on six GPUs (C++; decode unchanged), and safer generator replacement without overlapping main-process host caches (Python).

ExLlamaV3 PR #447 | TabbyAPI PR #493

TECHNICAL SKILLS

Product and APIs: TypeScript, React, Next.js, Node.js, Go, Python, FastAPI

Data and cloud: PostgreSQL, Redis, AWS, Railway, Docker, Terraform, Linux

Delivery and agents: GitHub Actions, Playwright, pytest, Hermes, MCP

CERTIFICATIONS

AWS Certified Developer - Associate | AWS Certified Cloud Practitioner
